

# *Lockdown solutions for K-12 schools.*

Today's schools have a broad range of security needs, but tight budgets demand solutions that are flexible enough to change as your school's needs change. Ingersoll Rand security solutions help you enhance what you already have in place, while providing a path toward a fully integrated lockdown solution.

Our education specialists can show you how to take small steps right now that can make a big difference. We'll also help you map a path to the optimal security solution that fits both your building and your budget.

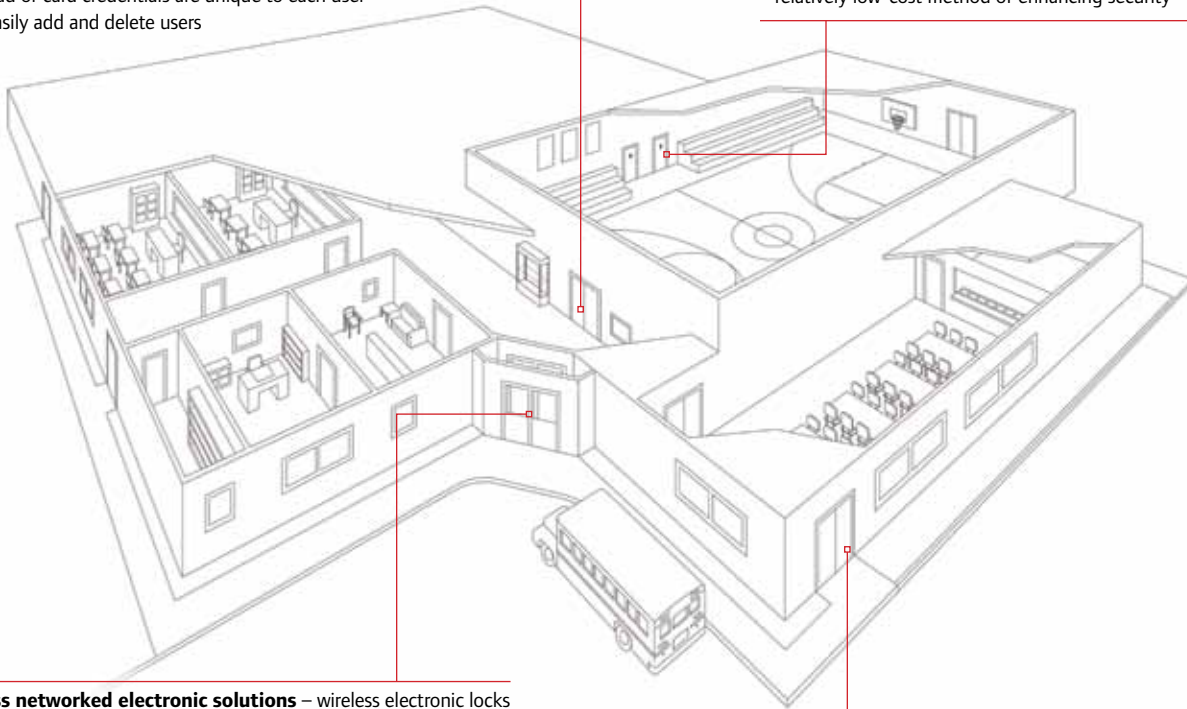

# Mechanical and electronic lockdown solutions.

**Hard-wired electronic solutions** – new construction or remodeling allows you to hard-wire electronic locks so that they can be connected to your computer network for easy centralized management.

- manage from central location for fast, effective lockdown
- PIN pad or card credentials are unique to each user
- can easily add and delete users

**Mechanical solutions** – doors that have mechanical locks can be enhanced by upgrading the locks to a patented or patented restricted keyway.

- keys cannot be duplicated without authorization
- relatively low-cost method of enhancing security

**Wireless networked electronic solutions** – wireless electronic locks deliver the flexibility of wireless installation with the enhanced security of an electronic lock that requires a unique credential for access.

- connect easily to your network for fast, effective lockdown
- wireless installation is fast and easy with minimal disruption
- can easily be integrated with other electronic hardware for an integrated life safety and security door solution
- PIN pad or card credentials are unique to each user
- can easily add and delete users

**Stand-alone electronic solutions** – wireless electronic locks with keypad or card readers take security to a higher level by requiring a unique credential to allow access.

- locks are programmed individually with a handheld device
- PIN pad or card credentials are unique to each user
- can easily add and delete users

## Ingersoll Rand can help open the door to peace of mind.

### Problem:

### Solution:

Unauthorized visitors in building during school hours.

Choose perimeter door hardware that can remain locked from the outside during school hours, while allowing quick, easy egress from inside, like the Von Duprin 99 Series exit device.

Keys being duplicated without authorization; not sure who has keys to which doors.

Switch to an Everest® Primus® patented key system. Your keys can only be duplicated by a qualified locksmith and with written permission, giving you total control of your keys.

Some staff need to access the building after hours or on weekends.

Choose electronic locks that provide an audit trail, paired with a Von Duprin 99 Series exit device, for controlling access to secondary perimeter doors. Tools like Schlage bright blue® or Security Management System (SMS) software allow you to set access privileges by time zone, date and more.

Need to lock down individual classrooms quickly and from the inside.

Schlage mechanical and electronic locks equipped with the classroom function can be locked down from the inside, preventing outside access to the room while still allowing quick, easy egress if needed.

Need to cut costs for replacing lost credentials; want highest level of access control.

Choose Schlage AD-Series locks that can support multiple credentials, such as a combination proximity card and PIN, for the highest level of security with no need for credentials to lose, forget or carry.

Need to lock multiple doors fast and effectively without going to individual door.

Schlage bright blue makes it easy to lock doors, assign credentials and track door use for up to 32 doors from any networked computer. Choose Schlage SMS for buildings with more than 32 networked doors.
